SMALL ANTIQUE HAND CARVED RED SANDSTONE TROUGH PLANTER | WEATHERED GARDEN WATER FEATURE

SKU: GD1724

£525.00

A small-scale, highly characterful antique trough planter, hand carved from red sandstone and bearing around 150 years of time-worn patina. Its compact proportions, irregular surface and natural moss and lichen coverage give it an established presence that feels quietly authentic and full of age.

The hand-worked stone has softened beautifully over time, creating an organic outline and textured surface suited to a cottage garden, courtyard, Japanese-inspired planting scheme or wabi sabi interior setting.

Its warm red sandstone tones and weathered surface make it especially decorative, bringing a sense of age and permanence to both newly designed and established spaces. Its modest scale also makes it easy to place on a terrace, garden wall, low plinth or sheltered interior display.

The trough has a drainage hole for planting alpines, succulents, herbs, mosses or a small bonsai-style arrangement. A central hole at the top front edge also allows it to be adapted for a simple water display, with water passing through the front to create a gentle feature.

A humble and honest garden antique, this red sandstone trough offers the qualities sought after

in old stone: texture, natural colouring and a mellow surface formed through long exposure to the elements. It is a charming piece for collectors, gardeners and designers looking to add depth and quiet rustic interest to a space.

External size W57cm x D26cm x H21cm

Internal size approx. W39cm x D15cm x H12cm

Origin and period: English, antique hand carved red sandstone trough, suitable as a small garden planter, decorative trough or water display feature. Red sandstone is a historic UK building and garden stone, strongly associated with regions such as Herefordshire and Chester, where its warm colour comes from iron oxide within the stone.
