SMALL ORGANIC COMPOSITE STONE EFFECT WATER FOUNTAIN GARDEN FEATURE - BONSAI POT

SKU: GD1721

£95.00

A small composite stone effect water fountain with a beautifully organic sculptural form, ideal for adding natural texture and movement to a garden, courtyard or terrace setting. Its irregular silhouette has an almost mountain-like shape, giving the piece a quiet, naturalistic presence.

Designed with a hole through the base and side, the piece is ideally suited for use as a small water fountain or bubbling garden feature. When connected to a suitable pump setup, it would allow water to pass through the form and create a simple, atmospheric focal point.

The stone effect surface and softly irregular outline give it an understated organic character, making it well suited to naturalistic planting schemes, Japanese-inspired gardens, wabi sabi interiors or quiet decorative corners outdoors.

Compact in scale, it could also be used as a small decorative planter, succulent bowl or bonsai pot, particularly where a raw, earthy aesthetic is desired. Its simple form works well with moss, miniature planting, gravel or water.

A versatile garden feature with a natural stone look, offering a decorative way to introduce texture, water and an organic sculptural element to a small outdoor space.

Overall size: approximately 28cm / 11 inches diameter at the base x H18cm / 7 inches. Round opening approximately 10cm / 4 inches diameter.

Origin and period: Contemporary composite stone effect garden fountain or decorative planter.
